Lab #8

Cantilever Frequency

7/30/13

Hypothesis:

The frequency similar material decreases as the thickness of the material increases.

Equipment:

- Camera
- Tripod
- Card Reader
- 4- Clamps
- Poster Board Strip with horizontal reference lines
- Poster Board strip 24" x 2.375 x .125
- Poster Board strip 24" x 1.25 x .25
- Computer

Procedure:

1. Clamp a poster board strip to the table top and position the poster board with horizontal lines parallel
2. Set up a video camera on a tripod to capture video of the oscillations of the cantilevered poster board strip.
3. Use the captured video count the number of oscillations over a 5 second interval of the video.
4. Set up a spreadsheet to determine the frequency of the board.
5. Repeat for a similar strip that is thicker.
6. Compare the results.

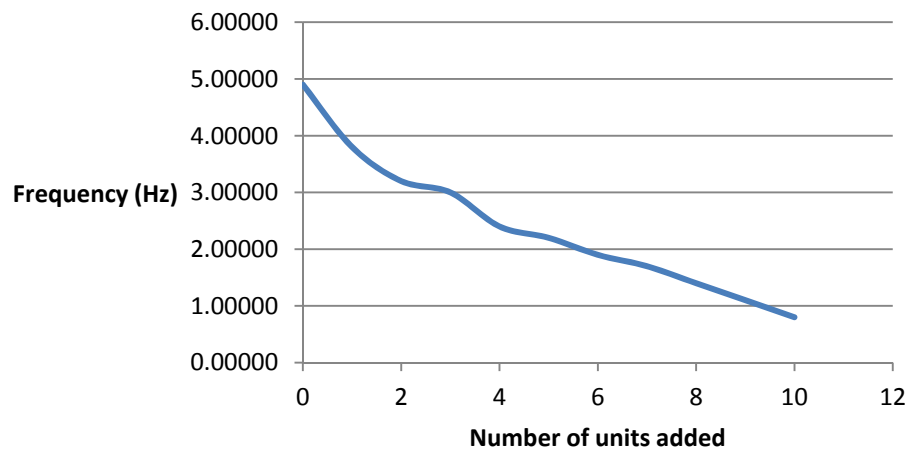

Lab #8 continued

Formula:

$$f = ((\#oscillations) * (\text{frames} / \text{second})) / (\#frames)$$

Camera Frame/ Second=	30	length=	9 7/16 inches
		width=	2 3/8 inches
		thickness=	0.125 inches
Units Added	#Oscilatio	Frames	Frequency
0	24.5	150	4.90000 Hz
1	19	150	3.80000 Hz
2	16	150	3.20000 Hz
3	15	150	3.00000 Hz
4	12	150	2.40000 Hz
5	11	150	2.20000 Hz
6	9.5	150	1.90000 Hz
7	8.5	150	1.70000 Hz
8	7	150	1.40000 Hz
9	5.5	150	1.10000 Hz
10	4	150	0.80000 Hz

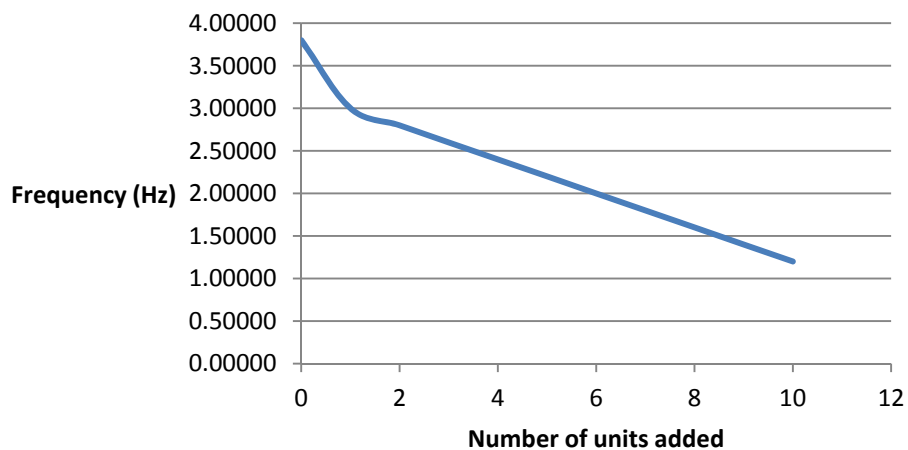

Frequency for Thinner Material

Lab #8 continued

Camera Frame/ Second=	30	length=	9 7/16 inches
		width=	1 1/4 inches
		thickness=	0.250 inches
Units Added	#Oscilatio	Frames	Frequency
	0	19	150 3.80000 Hz
	1	15	150 3.00000 Hz
	2	14	150 2.80000 Hz
	3	13	150 2.60000 Hz
	4	12	150 2.40000 Hz
	5	11	150 2.20000 Hz
	6	10	150 2.00000 Hz
	7	9	150 1.80000 Hz
	8	8	150 1.60000 Hz
	9	7	150 1.40000 Hz
	10	6	150 1.20000 Hz

Frequency for Thicker Material

Lab #8 continued

Observations:

While the thicker board was narrower it did not seem to matter

Conclusion:

The thicker the material is the lower the frequency of the cantilever.

Video of Test of Thinner Material without any units added
